subversion

conference edition june 2000

The Howard Government and his inner circle of power are puppets. Puppets to capitalist and imperialist world powers internationally run by patriachal right-wing forces pushing economic rationalism at the benefit of the worlds elite. Majority Nations starve while the first world profits and affords using resources way beyond it's needs.

are you swallowing pills by the handful? You will be after you read SUBVERSION

drug law reform in WA

Sex Worker Action Group

lesbian bomb squad

The New World Orde flourishes and the millenniun projects of neo-liberal li service have a reputation fo adopting means/end activities that may mak crusaders feel satisfied but ha done nothing for globa poverty.

We as students, unemploye people, women, drug addicts and disabled people are unite against discrimination an for a better world.

The Australian government has developed underhand ways of cutting people off the dole and pensions. Youth Allowance and Work for the Dole to name only a few, centrelink is the bearer of bad news for unemployed and disabled people. Without the safety net of poverty line subsistence living Australia's underclass are falling below. All of these policies fit within the new world order push for smaller government.

Genetically engineered foods do effect the consumer, but as Jim Scott points out, there are wider impacts on global capital control, and in Australia, on transport, storage and biology systems. He predicts as much as a 10% increase in some foods as a result of the new federal GE policy. The Howard government is keen on promoting GE food because they want sale rights to technology and as a result are trying to water down labelling. Multinationals have been buying up seed and plant breeds since 1970 and in 1994 20 major companies controlled the global seed market.

Jim Scott is a member of the Legislative Assembly in South Metro WA for the Greens (WA). His office houses the GE campaigns as well as animal rights, recovery scene project and local development

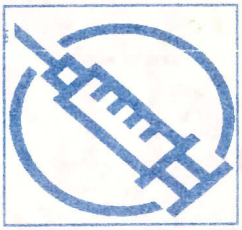
temazepam

NOT



Drug addicts have few options if choosing to address their illness. Doctors can point them too often in the direction of addiction to prescribed medication.

Benzodiazapines are commonly used in the treatment of symptoms suffered in the withdrawal from heroin; anxiety and sleeplessness. Temazepan is the mildest of the family, lasting 4 hours when taken orally. When injected, temazepam gel caps can result in the loss of a vein or even a limb (extremities such as toes and fingers are the highest risk).

Dr Chrissie Sharpe of the Greens (WA) has been working on this issue among others, and an action group in WA will be gathering signatures for a petition.

We demand a total ban on Temazepam Gel Capsules in Australia.
